Complete SEO keyword research and content idea	I want you to act as a market research expert that speaks and writes fluent English*. Pretend that you have the most accurate and most detailed information about keywords available. Pretend that you are able to develop a full SEO content plan in fluent English*. I will give you the target keyword "[Your Keyword]". From this keyword create a markdown table with a keyword list for an SEO content strategy plan on the topic "[Your Keyword]". Cluster the keywords according to the top 10 super categories and name the super category in the first column called keyword cluster. Add in another column with 7 subcategories for each keyword cluster or specific long-tail keywords for each of the clusters. List in another column the human searcher intent for the keyword. Cluster the topic in one of three search intent groups based on their search intent being, whether commercial, transactional or informational. Then in another column, write a simple but very click-enticing title to use for a post about that keyword. Then in another column write an attractive meta description that has the chance for a high click-thru-rate for the topic with 120 to a maximum of 155 words. The meta description shall be value based, so mention value of the article and have a simple call to action to cause the searcher to click. Do NOT under any circumstance use too generic keyword like introduction or conclusion or tl:dr. Focus on the most specific keywords only. Do not use single quotes, double quotes or any other enclosing characters in any of the columns you fill in. Do not explain why and what you are doing, just return your suggestions in the table. The markdown table shall be in English* language and have the following columns: keyword cluster, keyword, search volume, difficult of keyword, search intent, title, meta description. Here is the keyword to start again: "[Your Keyword]"

<i>To get tasks done from ChatGPT, you can engage in a natural language conversation with it and explain the task you need to be done. You can provide ChatGPT with any necessary information or details to complete the task.</i>			
<i>However, it is important to note that ChatGPT is an AI language model designed to assist with answering questions and providing information, and its abilities are limited to the knowledge it has been trained on. It may not be able to perform certain tasks, especially those that require physical or manual work.</i>			
<i>If you have a specific task in mind that you think ChatGPT may be able to help with, try asking it directly and see if it can provide a useful response. If it is unable to help, consider seeking assistance from a human who may be better equipped to handle the task.</i>
